📍 Aguascalientes, Mexico

Professional Summary

Senior Full-Stack Developer with 12 years of experience designing, modernizing, and scaling enterprise systems. Specialized in Java, Spring Boot, and microservices with a strong focus on event-driven architectures, clean code, automated testing, and cloud-native practices. Proven history in large-scale consulting environments (IBM, Capgemini, Tata, Softtek) delivering robust solutions, refactoring legacy systems, introducing testing practices, and improving operational efficiency through automation.

Core Skills

Backend & Microservices: Java, Spring Boot, Spring Cloud, JAX-RS, Kafka, Node.js
Frontend: React, Angular, TypeScript, JavaScript

Architectures: Microservices, Hexagonal Architecture, Event-Driven Architecture, DDD, Clean Code, TDD, Test Pyramid

Cloud & DevOps: AWS, Kubernetes, Docker, Terraform, CDK/CloudFormation, CI/CD, Grafana, ELK, Jenkins

Databases: Oracle, Postgres, MongoDB

Languages: English (Fluent), Spanish (Native/Bilingual)

Experience

Full-Stack Developer, Tata Consulting Services 09/2025 - Present
Strengthening backend architecture and microservices design as part of an internal engineering team. Expanding expertise in scalable Java systems and event-driven patterns.

Full-Stack Developer, Capgemini (at MetLife) 10/2024 - 01/2025
Enhanced a large insurance platform by refactoring 30% of the Java microservice codebase, aligning it with Spring Boot best practices for better scalability and maintainability.
Implemented structured testing with JUnit/Mockito, raising coverage from 0% to 20% and significantly improving code reliability.

Software Engineer, IBM (at D&B) 12/2023 - 03/2024
Ensured stability and performance of a financial analytics platform by resolving production incidents, optimizing workflows, and reducing downtime.
Improved incident response efficiency through ServiceNow automation and process streamlining.

Full-Stack Developer, IBM (at Discovery)

01/2023 - 11/2023

Developed and enhanced microservices for a banking application, integrating customer SSN data and extending case/product management functionality. Introduced automated tests to legacy services, improving maintainability and reducing regression issues.

Full-Stack Developer, Softtek (at Walmart)

09/2020 - 12/2022

Maintained and developed 15+ microservices using Spring Boot and Node.js in a high-traffic retail ecosystem. Automated operational tasks with Bash/Python scripts, improving efficiency and reducing manual workload. Migrated core services to Walmart's Cloud Native platform and Kafka, improving scalability and deployment workflows. Modernized Spring Boot applications, Docker images, and dependencies to strengthen reliability and security.

**Site Reliability Engineer,
Softtek (at Southwest Airline)**

08/2017 - 09/2020

Automated critical operational workflows for airline systems, reducing manual effort for the operations team. Built monitoring and incident automation using Python/Bash and REST APIs integrated with ServiceNow.

Java Web Developer, Softtek (at General Electric)

05/2015 - 08/2017

Maintained and enhanced an invoicing system that processed transactional data from FTP text files. Improved Oracle performance through SQL/PLSQL tuning and automated bulk imports with SQL Loader.

Java Web Developer, INEGI

03/2010 - 05/2015

Maintained and supported the SIMBAD census database system, ensuring accuracy, performance, and long-term reliability.

Education

Computer Systems Engineering - Instituto Tecnológico de Acapulco (2003 - 2008)

Certifications

Scrum Fundamentals Certified

Java EE 6 Web Component Developer Certified Expert

Oracle Certified Professional, Java SE 6 Programmer
